

# Infitec Presentation System

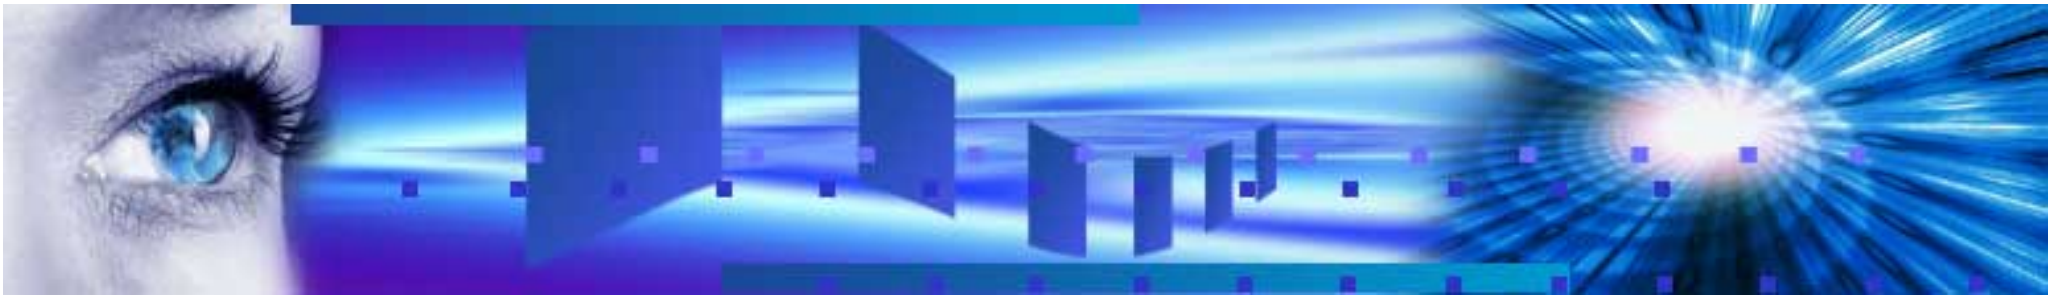

# INFITEC

- INFITEC – a new stereoscopic visualisation tool by wavelength multiplex imaging.
- INFITEC was a result from a research project by DaimlerChrysler in Germany. Under the project title "wavelength multiplex visualisation system" it was investigated how far the new technical approach is suited to improving image quality and to enlarge functionally in Virtual Reality systems.

# INFITEC advantages

- No silver screen required – can be used on any existing front or rear projection screen, even a white wall.
- Excellent 3D – superior channel separation (virtually no ghosting)
- Works with all digital projection techniques (LCD, DLP color wheel, D-ILA).
- No loss of 3D when eyes are off-axis – perfect for when person is in motion.
- Extreme wide viewing angle – without loss of 3D.
